

AI Proactive Video Deterrence

Go beyond reactive systems—leverage proactive video deterrence to stop crime before it escalates.

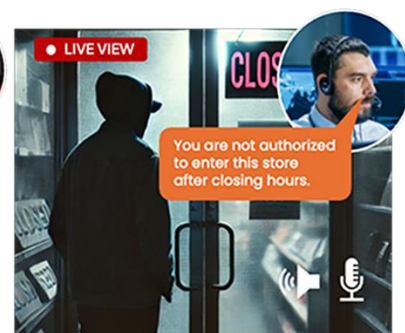

Lighting Deterrence

AI Deterrence Talkdown

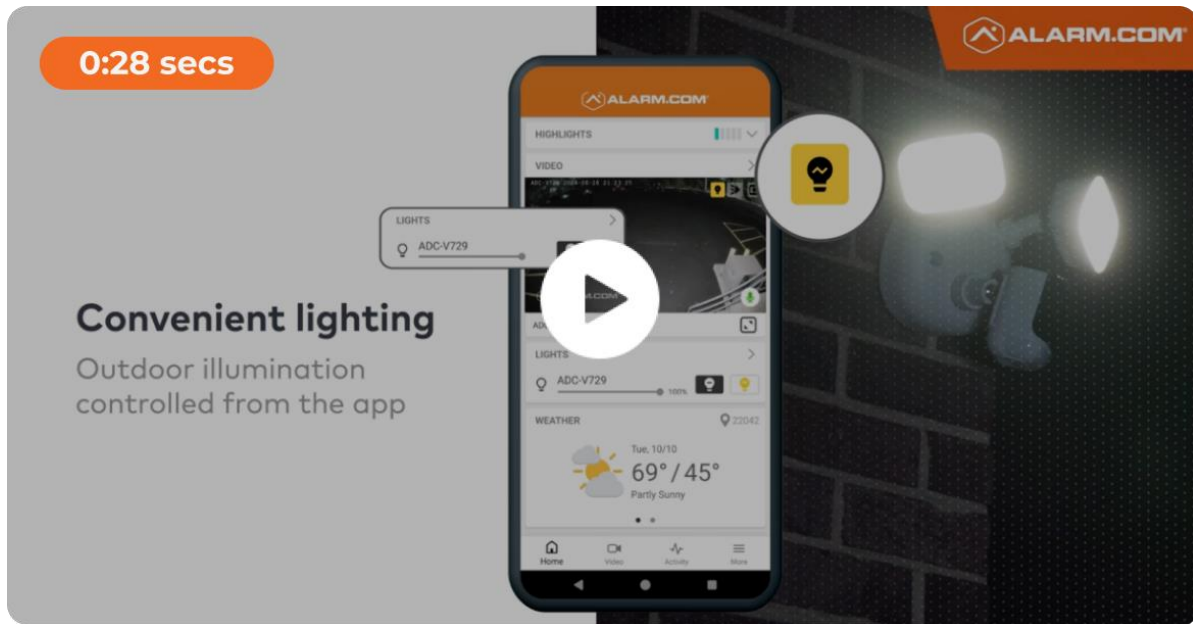

Remote Video Monitoring

Outdoor Floodlight Camera

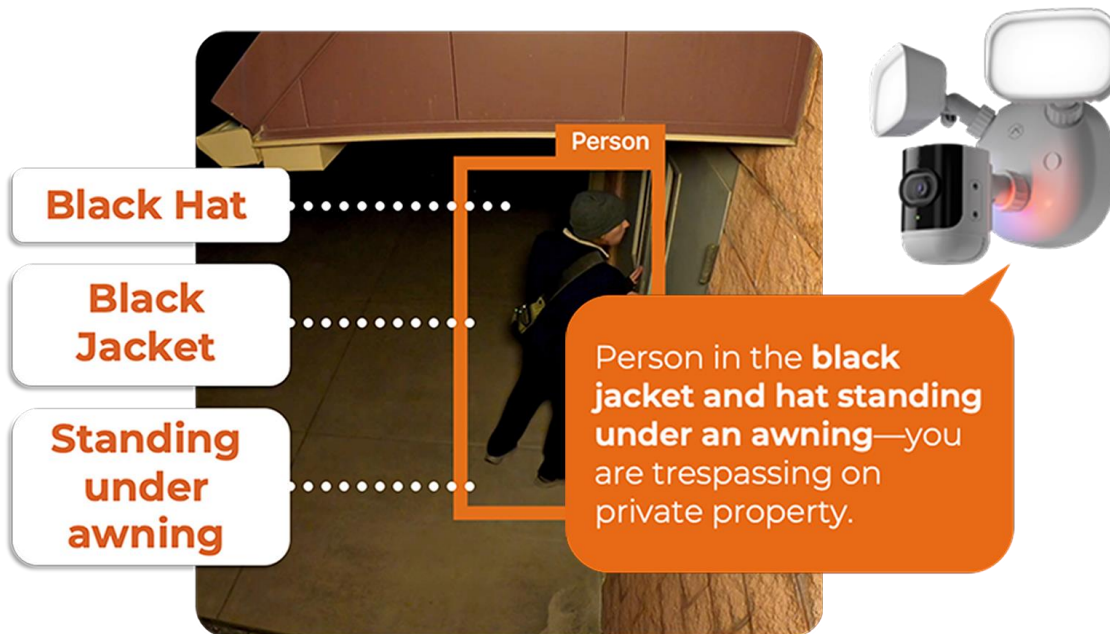

Equipped with 4MP video, Video Analytics, and two-way audio, the Outdoor Floodlight Camera offers powerful deterrence features, including red and blue warning lights, a loud siren, and professional support through the Remote Video Monitoring (RVM) Console.

AI Deterrence (AID)

Stop intruders with AI Deterrence (AID). Combining advanced AI with industry-leading Video Analytics, AID delivers dynamic, AI-generated audio responses while identifying trespassers' clothing, colors, and location on the property.

Like other Video Analytics features, AID can be configured in seconds as part of any recording rule. When paired with the Remote Video Monitoring Console, it provides a powerful layer of protection.

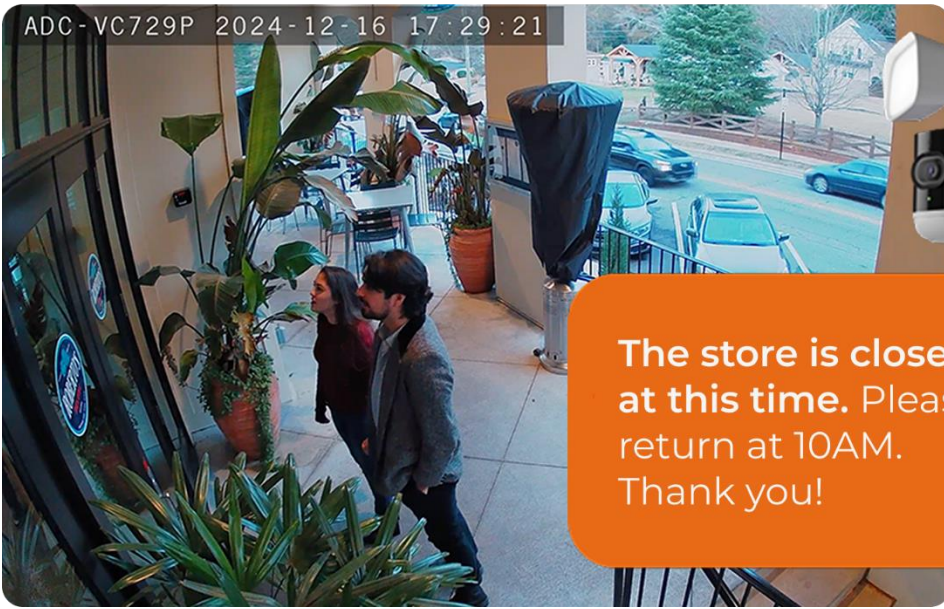

Additional AI Deterrence response modes

AI Deterrence (AID) response modes let customers customize messaging—from default deterrence to informative messages about operating hours, professional monitoring, or site access.

These upgrades deliver a more personalized experience and help create the impression of a live operator.
