
Deako Smart Lighting - Integration Guide

Deako Smart Devices can be added to an Alarm.com ecosystem to include lighting automation as part of a smart home or business experience. Deako Smart Devices can be remotely controlled and automated using the Customer website and Customer app.

Deako lighting products have a unique modular plug-in design, so can upgrade customers to more advanced options easily, without the expense of an onsite electrician and high-voltage wiring.

Requirements

- Compatible mobile versions:
 - iOS device with firmware version 8.0+
 - Android device with firmware version 2.1+
 - Alarm.com mobile app version 4.10.4+
- Current versions of the Deako mobile app
- At least one Wi-Fi-enabled Deako Smart Device (e.g., Deako Connect, Deako second-gen Smart Switch, etc.)
- *Light & Thermostat Bundle*, or *Lights* service package add-on

Features

- Remote control and automate lights with rules, schedules, and Scenes

Note: The physical Scene buttons on Deako Scene Controller devices are only compatible with Deako Scenes. These devices can still be added to Alarm.com Scenes, but they must be run remotely.

- Sleek, modern look with screw-less faceplate
- Modular, plug-in design for easy upgrades (for more information, visit [Deako.com](https://deako.com))
- Fit into a variety of switch wiring setups
 - Single pole (two brass terminal screws and On/Off toggle; controls one fixture from a single location)
 - 3-way (three terminals; controls one fixture from two locations)
 - 4-way (four terminals; controls one fixture from three locations)

Integrate the Deako account to Alarm.com using the Add Device Portal

Use the Deako app login to add a Deako Smart Device to the Alarm.com account using the Add Device Portal in the Customer website or app.

For more information about how to enable the Add Device Portal, see [Add Device Portal](#).
