
Hunter Hydrowise - Integration Guide

Alarm.com offers your customers seamless irrigation management with the widely adopted Hunter Hydrowise Wi-Fi Irrigation controllers. Customers can run their system, view key zoning and schedule information, and use advanced settings like rain delay to prevent water waste and ensure proper watering for their entire property from the Customer app.

Requirements

- A compatible Hydrowise Controller (i.e., HCC, HPC, X2, or Pro-HC)
- iOS app version 5.9.4+ or Android app version 5.7.4+
- Hydrowise app with a customer account login
- *Irrigation Control* service package add-on

Before Integrating

Install the Hydrowise controller

Only the HCC, HPC, X2, and Pro-HC controllers are compatible with this integration. Refer to manufacturer-provided installation instructions to complete.

Create the Hydrowise customer account

The Hydrowise controller needs to be connected to the local Wi-Fi network. Download the Hydrowise app to create an account.

Note: Remember the username and password as they will be needed later in the process.

Create the Alarm.com customer account or update an existing account

1. Create the Alarm.com customer account if one has not been created yet.
 - For information about creating a customer account, see [How to create Alarm.com customer accounts](#).
2. Verify the customer has the Irrigation Control service package add-on enabled.
 - For information about updating the service package, see [Update the service package on a customer account](#).
3. Have the customer log in to the Customer website or Customer app and complete account setup (if necessary).

Add the Hunter Hydrowise Controller to the customer's Alarm.com account

The Hunter Hydrowise Controller can be added to the customer's Alarm.com account using the Customer app.

To add the Hunter Hydrowise Controller to the customer's Alarm.com account:

1. Log in to the Customer app.
2. Tap **Irrigation**.
3. Tap **Connect Irrigation**.
4. Select **Hydrawise**.
5. Enter the customer's Hunter Hydrowise app credentials, then tap to grant permission if asked.
6. The *Irrigation* card on the Home screen will automatically refresh after authorization is complete.

Available Features

- View watering zones and existing schedules from the Alarm.com Customer app
- Manually start irrigation on selected zones and configure run time
- Setup a rain delay in the event of inclement weather to prevent over watering
- Toggle on *Standby Mode* to skip all scheduled watering times and manually control the system
- Creating and editing irrigation schedules and forecast data are available in the Hydrowise app
